

AMENDMENTS TO THE CLAIMS:

The listing of claims will replace all prior versions, and listings, of claims in the application.

Listings of Claims:

Please Amend the remaining claims as indicated below:

1. (Currently amended) In a mobile wireless communications device, including a display screen with a screen axis, a method for displaying direction, comprising: and a reference axis; wherein displaying the reference axis includes:
determining the magnetic bearing of the wireless communications device;
selecting a reference axis having a predetermined relationship to the magnetic bearing;
fixedly aligning the reference axis with the screen axis; and,
displaying the reference axis on the display screen; and
displaying a direction associated with the reference axis on the display screen.

~~supplying a direction readout of the reference axis responsive to the rotation of the screen axis, a method for presenting a direction, the method comprising:~~
~~—— determining the magnetic bearing of the wireless communications device;~~
~~—— wherein determining the magnetic bearing of the wireless communications device includes selecting a reference axis having a predetermined relationship to the magnetic bearing; and,~~

~~wherein presenting a direction responsive to the magnetic bearing includes displaying the reference axis; and,~~

~~presenting a direction responsive to the magnetic bearing.~~

2. (Canceled).

3. (Previously presented) The method of claim 1 wherein the reference axis points to magnetic North.

4. (Canceled).

5. (Canceled).

6. (Currently Amended) The method of claim 1 further comprising:
receiving global positioning system (GPS) location information;
receiving map information; and,
~~wherein displaying the reference axis includes creating and displaying a~~
map display responsive to the map information, showing the wireless communications device location on the map.

7. (Currently Amended) The method of claim 6 further comprising in which the wireless communications device includes a
display screen with a screen axis;
~~wherein displaying the reference axis includes:~~
~~fixedly aligning the reference axis with the screen axis; and,~~
rotating the map display in response to the rotation of the screen axis.

8. (Currently Amended) The ~~system~~method of claim 7 wherein ~~displaying the reference axis includes displaying the magnetic bearing of the reference axis~~the direction displayed corresponds with the direction the wireless communication device is moving.

9. (Canceled)

10. (Currently Amended) The method of claim ~~9-8~~ wherein displaying the ~~magnetic bearing of the display screen axis~~direction includes displaying a magnetic bearing icon on the map.

11. (Original) The method of claim 1 wherein determining the magnetic bearing of the wireless communications device includes correcting the magnetic bearing with respect to true North.

12. (Previously presented) In a mobile wireless communications device, a system for indicating a direction, the system comprising:

a magnetic detection circuit to determine orientation in a magnetic field, the magnetic detection circuit having an output to supply a magnetic bearing signal responsive to the determined orientation;

a direction circuit having an input to accept the magnetic bearing signal and an output to communicate a reference axis signal, wherein the direction circuit has an input to accept data defining a relationship between the magnetic bearing and a reference axis, wherein the direction circuit determines the direction of the reference axis based on the defined relationship; and,

a user interface screen having an input to receive the reference axis signal and an output display responsive to the magnetic bearing of the wireless communication device wherein the user interface screen displays the reference axis direction and has a surface with a screen axis defined with respect to the surface wherein the direction circuit defines the reference axis to be fixedly aligned with the screen axis and the reference axis signal is responsive to the rotation of the screen axis; and

wherein the user interface screen displays the direction of the screen axis.

13. (Canceled).

14. (Canceled)

15. (Canceled).

16. (Canceled)

17. (Previously presented) The system of claim 12 wherein the direction circuit has an input to receive GPS location information and an input to receive map information oriented in a directional coordinate system and wherein the direction circuit uses the GPS and map information to generate a map showing the location of the wireless communications device, and wherein the direction circuit supplies a map signal for displaying the map with the reference axis signal; and wherein

the user interface screen accepts the map signal and displays the map in response to the map signal.

18. (Currently amended) The system of claim 17 ~~wherein the user interface screen has a surface with a screen axis defined with respect to the surface;~~

~~wherein the direction circuit defines the reference axis to be fixedly aligned with the screen axis and~~ rotates the map directional coordinate system in response to the reference axis; and,

wherein the user interface screen rotates the map display in response to rotations of the screen axis.

19. (Original) The system of claim 18 wherein the user interface screen displays the direction of the screen axis.

20. (Currently amended) The system of claim 17 ~~wherein the user interface screen has a surface with a screen axis defined with respect to the surface;~~

wherein the direction circuit defines the reference axis to be fixedly aligned with the screen axis and transposes the screen axis direction onto the map directional coordinate system; and

wherein the user interface screen displays a map showing the location of the wireless device and the direction of the screen axis.

21. (Original) The system of claim 20 wherein the direction circuit generates a directional icon, overlaid on the map.

22. (Original) The system of claim 12 wherein the magnetic detection circuit corrects the magnetic bearing with respect to true North.

23. (New) The method of claim 1, wherein the direction displayed corresponds with the direction the wireless communication is pointing.

24. (New) The method of claim 1, wherein the direction is provided in quadrants.

25. (New) The method of claim 1, wherein the direction is displayed in subquadrants.

26. (New) The method of claim 1, wherein the direction is displayed in degrees.

27. (New) The system of claim 12, wherein the direction is provided in quadrants.

28. (New) The system of claim 12, wherein the direction is displayed in degrees.
